

# Order API model

Property	Name	Type	Description
id	Order id	Guid	Guid of the order
orderNumber	Order number	Integer	The number of the order
externalId	External id	String	The external id of the order
externalEmployeeCode	External employee code	String	The external employee code
studentExternalCompany	Student external company	String	The company the student is working for
name	Name	String	The name of the course
status	Status	Enum	The status of the order. Allowed values: OrderStatus
purchaseOrderReference	Purchase order reference (account)	String	The purchase order from the account
providerPurchaseOrderReference	Purchase order reference provider	String	The purchase order for the provider
invoiceNumber	Invoice number	Integer	The number of the invoice
costCentre	Cost Center	String	The cost center number
orderType	Order type	Enum	The type of product ordered (e.g. course) Allowed values: OrderType
productTypeDisplayValue	Product type display value	String	Display value of the product type
principalId	Principal ID	String	Used for identifying the student on the account side
accountReference	Account reference	Object	The identifier for the account
accountReference.id	Account reference id	Guid	Identifier of the account
accountReference.url	Account reference url	String	Url where account details can be found
accountName	Account name	String	Name of the account
assortmentReference	Assortment reference	Object	The identifier for the assortment
assortmentReference.id	Assortment reference id	Guid	Identifier of the assortment
assortmentReference.url	Assortment reference url	String	Url where assortment details can be found
assortmentName	Assortment name	String	Name of the assortment
providerReference	Provider reference	Object	The identifier for the provider
providerReference.id	Provider reference id	Guid	Identifier of the provider
providerReference.url	Provider reference url	String	Url where provider details can be found
providerName	Provider name	String	Name of the provider
productReference	Product reference	Object	The identifier for the product
productReference.id	Product reference id	Guid	Identifier of the product
productReference.url	Product reference url	String	Url where product details can be found
educationalCareerReference	Educational career reference	Object	The identifier for the educational career
educationalCareerReference.id	Educational career reference id	Guid	Identifier of the educational career
educationalCareerReference.url	Educational career reference url	String	Url where educational career details can be found
educationalFulfillmentReference	Educational fulfillment reference	Object	The identifier for the educational fulfillment
educationalFulfillmentReference.id	Educational fulfillment reference id	Guid	Identifier of the educational fulfillment
educationalFulfillmentReference.url	Educational fulfillment reference url	String	Url where educational fulfillment details can be found
learningMethodName	Learning method name	String	Name of the learning method
learningMethodFormatDisplayValue	Learning method format display value	String	Display value of the learning method
startMomentYear	Startmoment year	Integer	Year of the startmoment
startMomentMonth	Startmoment month	Integer	Month of the startmoment
startMomentDay	Startmoment day	Integer	Day of the startmoment

startMomentDate	Startmoment date	date time (ISO_8601)	Date of the startmoment
startMomentLocation	Startmoment location	String	Location of the startmoment
startMomentStartGuaranteed	Startmoment guaranteed	Boolean	Guaranteed startmoment indication
secondStartMomentYear	Second startmoment year	Integer	Year of the second startmoment
secondStartMomentMonth	Second startmoment month	Integer	Month of the second startmoment
secondStartMomentDay	Second startmoment day	Integer	Day of the second startmoment
secondStartMomentDate	Second startmoment date	date time (ISO_8601)	Date of the second startmoment
secondStartMomentLocation	Second startmoment location	String	Location of the second startmoment
acceptedStartMomentId	Accepted startmoment id	Guid	Id of the accepted startmoment
acceptedStartMomentLocation	Accepted startmoment location	String	Location of the accepted startmoment
acceptedStartMomentDate	Accepted startmoment date	date time (ISO_8601)	Date of the accepted startmoment
orderLines	Order lines	Object	All n order lines for this order
orderLines.sequenceNumber	Order lines sequence number	Integer	Sequence number
orderLines.costType	Order lines cost type	Enum	Cost type Allowed values: CostType
orderLines.costTypeDisplayValue	Order lines cost type display value	Enum	Display value of the cost type Allowed values: CostType
orderLines.quantity	Order lines quantity	Integer	Quantity of the order line
orderLines.subtotalWithoutVAT	Order lines subtotal without VAT	Decimal	Subtotal without VAT
orderLines.vatCountry	Order lines VAT country	String	Country where VAT was applied
orderLines.vatPercentage	Order lines VAT percentage	Decimal	VAT percentage
orderLines.discountPercentage	Order lines discount percentage	Decimal	Discount percentage
orderLines.vatAmount	Order lines VAT amount	Decimal	VAT amount
orderLines.discountAmount	Order lines discount amount	Decimal	Discount amount
orderLines.total	Order lines total	Decimal	Total of the order line
orderLines.invoiceOnBehalfOf	Order lines Invoice of behalf of	Object	Invoice of behalf of
orderLines.invoiceOnBehalfOf.id	Order lines Invoice of behalf of id	Guid	ID from the legal company
orderLines.invoiceOnBehalfOf.merchantId	Order lines Invoice of behalf of merchant id	Guid	ID of the merchant
orderLines.invoiceOnBehalfOf.Name	Order lines Invoice of behalf of name	String	Name of the legal company
orderLines.invoiceOnBehalfOf.vatNumber	Order lines Invoice of behalf of VAT number	String	VAT number of the legal company
total	Total	Decimal	Total amount of the order
invoicedBy	Invoiced by	String	Depicting who is invoicing the order
InvoicedByDisplayValue	Invoiced by display value	String	Display name of invoiced by
orderStatusTransitions	Order status transitions	Array	All the transitions the order went through
orderStatusTransitions.orderId	Order status transitions order id	Guid	ID of the order
orderStatusTransitions.dateCreated	Order status transitions date created	date time (ISO_8601)	Date status transition is created
orderStatusTransitions.status	Order status transitions status	Enum	Status transition of the order Allowed values: OrderStatus
orderStatusTransitions.statusDisplayValue	Order status transitions status display value	Enum	Display value of the status transition Allowed values: OrderStatus
orderStatusTransitions.message	Order status transitions message	String	Message of the transition

orderStatusTransitions.cancellationReason	Order status transitions cancellation reason	Enum	Cancellation reason Allowed values: CancellationReason
orderStatusTransitions.cancellationReasonDisplayValue	Order status transitions cancellation reason display value	Enum	Cancellation reason display value Allowed values: CancellationReason
orderStatusTransitions.adminCancellationReason	Order status transitions admin cancellation reason	Enum	Cancellation reason from admin Allowed values: AdminCancellationReason
orderStatusTransitions.adminCancellationReasonDisplayValue	Order status transitions admin cancellation reason display value	Enum	Cancellation reason from admin display value Allowed values: AdminCancellationReason
orderLineFees	Order line fees	Array	Order line fees for providers
orderLineFees.sequenceNumber	Order line fees sequence number	Integer	Sequence number of the order fees
orderLineFees.orderNumber	Order lines fees order number	Integer	Order number for which the fee is calculated
orderLineFees.feeAmount	Order line fees fee amount	Decimal	The amount of fee
orderLineFees.feePercentage	Order line fees fee percentage	Decimal	The fee percentage
orderLineFees.feeStatus	Order line fees fee status	Enum	The fee status Allowed values: OrderFeeStatus
orderLineFees.feeStatusDisplayValue	Order line fees fee status display value	Enum	The Dutch display value of the fee status Allowed values: OrderFeeStatus
orderLineFees.costType	Order line fees cost type	Enum	The cost type where the fee is calculated from Allowed values: CostType
orderLineFees.costTypeDisplayValue	Order line fees cost type display value	Enum	The Dutch display value of the cost type Allowed values: CostType
orderLineAccountFees	Order line account fees	Array	Order line fees for accounts
orderLineAccountFees.sequenceNumber	Order line account fees sequence number	Integer	Sequence number of the account order fees
orderLineAccountFees.orderNumber	Order line account fees order number	Integer	Order number for which the account fee is calculated
orderLineAccountFees.feeAmount	Order line account fees fee amount	Decimal	The amount of account fee
orderLineAccountFees.feePercentage	Order line account fees fee percentage	Decimal	The account fee percentage
orderLineAccountFees.feeStatus	Order line account fees fee status	Enum	The account fee status Allowed values: CostType
orderLineAccountFees.feeStatusDisplayValue	Order line account fees fee status display value	Enum	The Dutch display value of the account fee status Allowed values: CostType
orderLineAccountFees.costType	Order line account fees cost type	Enum	The cost type where the account fee is calculated from Allowed values: CostType
orderLineAccountFees.costTypeDisplayValue	Order line account fees cost type display value	Enum	The Dutch display value of the cost type Allowed values: CostType
teamLeaderName	Team leader name	String	Name of the teamleader
teamLeaderEmailAddress	Team leader e-mail address	String	E-mail address of the teamleader
teamLeaderPhoneNumber	Team leader phone number	String	Phone number of the teamleader
teamLeaderCostCentre	Team leader cost centre	String	Cost centre of the teamleader
teamLeaderDepartment	Team leader department	String	Department of the teamleader
teamLeaderPersonnelNumber	Team leader personell number	String	Personell number of the team leader
isProfessionalCourse	Is professional course	Boolean	Depicting if the course is a professional course
isConsumer	Is consumer	Boolean	Is the order for a consumer
requireAccountApproval	Require account approval	Boolean	If the order requires approval
calculateProviderFee	Calculate provider fee	Boolean	If provider fee needs to be calculated
hasSubsidy	Has subsidy	Boolean	If the product type has subsidy

subsidy	Subsidy	Enum	Subsidy if applicable Allowed values: Subsidy
subsidyDisplayValue	Subsidy display value	Enum	Display value of the subsidy Allowed values: Subsidy
isVatExempt	Is VAT exempt	Boolean	Whether the order is VAT exempt
promotionalCode	Promotional code	String	Promotional code if present
customAttributes	Custom Attributes	Object	Custom attributes on the order
customAttributes.firstChoiceStartMomentId	First choice startmoment id	Guid	ID of the first startmoment provided on order creation
customAttributes.secondChoiceStartMomentId	Second choice startmoment id	Guid	ID of the second startmoment provided on order creation

## Customer address

Property	Name	Type	Description
customer	Customer	Object	Details of the customer
customer.initials	Customer initials	String	Initials of the customer
customer.gender	Customer gender	Enum	Gender of the customer
customer.birthDate	Customer birth date	String	Birth date
customer.birthCity	Customer birth city	String	Birth city
customer.firstName	Customer First name	String	First name of the customer
customer.middleName	Customer Middle name	String	Middle name of the customer
customer.lastName	Customer Last name	String	Last name of the customer
customer.email	Customer e-mail	String	E-mail of the customer
customer.phoneNumber	Customer phone number	String	Phone number of the customer
customer.company	Customer company	String	Company of the customer
customer.department	Customer department	String	Department of the customer
customer.address	Customer address	Object	Address of the customer
customer.address.street	Customer Address Street	String	Street name
customer.address.houseNumber	Customer address house number	Integer	House number
customer.address.houseNumberAdditive	Customer address house number additive	String	House number additive
customer.address.postalCode	Customer address postal code	String	Postal code
customer.address.city	Customer address city	String	City
customer.address.countryCode	Customer address country code	String	Country code

## Bill to address

Property	Name	Type	Description
billTo	Bill To	Object	Details of where the bill has to go to
billTo.organisationalUnit	Bill to organizational unit	String	Organizational unit the bill has to go to
billTo.gender	Bill to gender	Enum	Gender of the billable person (if any)
billTo.firstName	Bill to first name	String	First name
billTo.middleName	Bill to middle name	String	Middle name
billTo.lastName	Bill to last name	String	Last name
billTo.email	Bill to e-mail	String	E-mail adress
billTo.phoneNumber	Bill to phone number	String	Phone number
billTo.company	Bill to company	String	Company
billTo.department	Bill to department	String	Department
billTo.address	Bill to address	Object	Address for the bill to

billTo.address.street	Bill to address Street	String	Street name
billTo.address.houseNumber	Bill to address house number	Integer	House number
billTo.address.houseNumberAdditive	Bill to address house number additive	String	House number additive
billTo.address.postalCode	Bill to address postal code	String	Postal code
billTo.address.city	Bill to address city	String	City
billTo.address.countryCode	Bill to address country code	String	Country code

## Delivery info address

	Property	Type	Description
deliveryInfo	Delivery information	Object	Address where materials need to be send to
deliveryInfo.gender	Delivery info gender	Enum	Gender
deliveryInfo.firstName	Delivery info first name	String	First name
deliveryInfo.middleName	Delivery info middle name	String	Middle name
deliveryInfo.lastName	Delivery info last name	String	Last name
deliveryInfo.email	Delivery info e-mail	String	E-mail address
deliveryInfo.phoneNumber	Delivery info phone number	String	Phone number
deliveryInfo.company	Delivery info company	String	Company
deliveryInfo.department	Delivery info department	String	Department
deliveryInfo.address	Delivery address	Object	Delivery address
deliveryInfo.address.street	Delivery info address Street	String	Street name
deliveryInfo.address.houseNumber	Delivery info address house number	Integer	House number
deliveryInfo.address.houseNumberAdditive	Delivery info address house number additive	String	House number additive
deliveryInfo.address.postalCode	Delivery info address postal code	String	Postal code
deliveryInfo.address.city	Delivery info address city	String	City
deliveryInfo.address.countryCode	Delivery info address country code	String	Country code
